# Visitor guidance — what a renovation assistant can answer

## What does initial guidance mean?

An initial explanation based on available documents. It does not replace a site visit, measurement, design, report by a competent technical professional or quotations with confirmed scope.

## Why can some questions not be answered?

Documentation may not cover a specific material, installation, area or requirement. Identifying missing information is preferable to inventing prices, brands, schedules or conclusions.

## Is a photograph enough to establish the cost?

No. A photograph provides context, but measurements, substrates, access, finish level, waste and possible concealed services are missing. Estimation requires scope and market data.

## Can it be guaranteed that a wall is not load-bearing?

Not without competent analysis. The assistant can explain what to verify but cannot certify structural stability.

## Is maintenance advice an instruction to carry out work?

No. Documentary explanation must distinguish safety recommendations, technical inspection and contractual decisions. Users need professional confirmation for risky interventions.

## What does it mean when an answer includes sources?

It identifies documentary excerpts used as evidence. A citation does not automatically guarantee that every detail is supported; visitors must be able to check the connection.

## Should an example price be cited as the user’s actual cost?

No. If a document contains the example “7 m² kitchen”, that figure must not be applied to a kitchen of unknown size unless unequivocally identified as an inapplicable example.

## What if a query combines a leak and aesthetic renovation?

Address the functional or safety problem first, then optional improvements. State that changing tiles, cabinets or appliances is not an obligatory consequence of repairing pipes.

## What if a source only explains a hypothetical case?

Explain that it is an illustrative example. Do not present it as a completed project, real testimonial or company experience.

## What if the user asks about a specific law?

Refer to a verifiable regulatory source for the stated jurisdiction and explain that application depends on the work. Do not present US or British requirements as Spanish law.

## Case AS-11 — Query with unknown floor area

**Hypothetical assessment case, not completed work or a service committed to by Riansares 4R.**

**Situation:** “How much will replacing my floor cost?”

**Checks:** Area, material, base, removal and location.

**Possible scope:** Request information before estimating.

**Decision criterion:** Do not introduce 7 m² because it appears in an FAQ.

**Evidence to retain:** List of missing information.

## Case AS-12 — Answer about a foreign standard

**Hypothetical assessment case, not completed work or a service committed to by Riansares 4R.**

**Situation:** A British source describes an asbestos risk.

**Checks:** Determine the work’s jurisdiction.

**Possible scope:** Use the guide as contextual good practice.

**Decision criterion:** Do not present it as a Spanish obligation.

**Evidence to retain:** Identified source and consultation of local regulations.

## Industry references and scope

- CTE_HS.
- BOE_RCD.

The references provide general context and do not establish that Riansares 4R has carried out work. Technical requirements must be verified for the applicable type of intervention and jurisdiction.
